

- 11) Identify and implement cost-effective water management strategies.
- 12) Seek to provide economically affordable power and water resource service to all citizens of the region.
- 13) Identify and implement actions to better measure and share water use data and information.

In addition, the Regional Water Plan has adopted several Short-Term Water Quantity and Water Quality Management Practices, which the local comprehensive plan should include in order to manage water resources in a sustainable manner through the planning period and beyond. The most significant issues in the Suwannee-Satilla Region are surface water availability gaps driven by agricultural usage. As such, the majority of water supply management practices are intended to address agricultural surface water use.

Future work program activities in this plan related to water quality management practices mentioned in the Regional Water Plan are highlighted in italics following the practices below. Additionally, notes regarding water quality needs within Lowndes County are included in the appendix to this plan in the Environmental Recommendations and Concerns section.
