

URBAN SERVICE AREA (USA)

(Lowndes County)

In an effort to control the timing, location, and scale of new development and to avoid a situation of “playing catch-up” in the provision of public facilities and infrastructure, the Greater Lowndes communities have established an Urban Service Area, which is reflected in the following Character Area/Future Development Maps.

An Urban Service Area (USA) is a geographically defined boundary that specifies where the local governments will provide urban services, such as water supply or sewage treatment, in the future. By delineating an USA, the community is effectively saying that it will support new urban density development only within the delineated area. Promotion of the USA will encourage higher density infill development within the boundaries, while helping to conserve natural resources and maintain the rural character of areas lying outside the boundary. (Areas outside of the USA boundary are often referred to as the Rural Service Area (RSA)).

The USA boundaries delineated in the Character Area/Future Development Maps should not be considered a projection for the long term. Currently, the USA boundaries are based on a 1-mile buffer from existing water and sewer infrastructure and/or plans for immediate extensions. It is the intent of this Comprehensive Plan to ensure that the USA boundaries do not conflict with the Service Areas agreed to by the Greater Lowndes governing bodies, within the Service Delivery Strategy. With that in mind, the USA should be updated on a regular basis to reflect the growth of each community’s utility systems in addition to any time the Service Areas for each local government are amended.
