

Lighting

- ❖ Large developments can create light pollution.
- ❖ Directional lighting will be addressed in Lowndes County's data center ordinance to include shielding, lumens and color temperature.
- ❖ The Lowndes County Board of Commissioners has already addressed the proposed location during the rezoning process by conditioning that all lighting "shall be shielded and directed to avoid illumination of adjacent properties zoned Residentially."
- ❖ The development of outdoor LED lighting has provided benefits related to directional lighting which has helped in decreasing light pollution when warm color temperatures are used with directional shielding.
