Dear McIntyre Cemetery, c/o Lowndes County:

You were recently mailed a letter announcing that Sabal Trail Transmission, LLC ("Sabal Trail") is evaluating a proposed natural gas pipeline project in your area (the "Project"). To help us analyze the proposed study corridor for the Project, our representatives are in the early stages of collecting and evaluating information necessary to determine a design that will minimize overall landowner, community, and environmental impact, while balancing constructability concerns. You are receiving this follow-up letter because your property is within the initial study corridor and we are requesting your consent to perform survey activities on your property, including area adjacent to or beyond the existing Sabal Trail easement.

These civil, environmental, and cultural resource surveys are required to thoroughly evaluate the pipeline route. These survey activities will be performed in a minimal amount of time with the goal of little to no inconvenience to you and other affected landowners. The survey activities and any minimal impacts that may result are more fully described in the enclosure entitled "Description of Survey Activities." While we do not anticipate that property damage will result from these survey activities, please be assured that you will be compensated for any and all damage to your property that is directly caused by these survey activities. Please also note that granting us authorization to access your property for the purpose of conducting these surveys does not grant the company any other rights. Your consent to survey your property and your cooperation with our representatives is sincerely appreciated.

A survey permission form is enclosed for your consideration. We ask that you please answer the questions concerning any well water and septic systems on your property so that we can better understand your property. We also ask that you sign the survey permission form and return it in the enclosed self-addressed stamped envelope. A company representative will contact you soon to better understand your property and identify ways to reduce impacts to your land. Our goal is for you to be as engaged and involved as possible throughout the process.

Please be assured that we are very early in the proposed Project process and you will have multiple opportunities to interact and engage with the Project team as well as participate in the applicable regulatory processes. It is our goal to communicate early and often about our Project activities in order to build positive relationships with all those whom we come into contact. I

would also note that, if approved by the Federal Energy Regulatory Commission (FERC”), the company would not begin construction on the Project before 2029.

If you have any questions or would like to discuss or obtain additional information concerning the early development activities associated with the proposed Project please call our landowner hotline toll-free at 1-844-963-3337 or visit our website at <https://www.sabaltrailtransmission.com/Project>. We will be happy to answer your questions during this early project development phase. We will be happy to answer your questions during this early project development phase.

Very truly yours,

A handwritten signature in black ink, appearing to read "Walton Johnson". The signature is fluid and cursive, with the first name "Walton" being more prominent than the last name "Johnson".

Description of Survey Activities

Depending on the size of an individual parcel, all survey activities described below should only take a minimal amount of time and should not result in any inconvenience to the property owner. All survey work will be performed during reasonable daylight hours only. All work will be performed by authorized professional surveyors and their crews. The surveys that the company will request for each property are:

(a) **Civil Survey**. This activity involves approximately four to five representatives, intermittently placing wooden stakes along a portion of each property to delineate the area described as the “study corridor.” Depending upon the length of the proposed study corridor on the property to be surveyed, this activity should take no longer than two days for each property that will be surveyed.

(b) **Environmental Survey**. This activity involves approximately two to three representatives walking within the study corridor, which will be clearly staked, to identify and delineate any vegetative and geological indicators of wetland areas that may be present on the property. The wetlands boundaries will be marked with small colored flags. Company representatives will also look for the presence of any threatened or endangered species, if a suspected habitat is within the staked area. Depending on the length of the proposed route of the pipeline on the property being surveyed, this activity should take no longer than three days for each property that will be surveyed.

(c) **Cultural Resources Survey**. This activity involves two to four representatives walking within the staked study corridor to identify any indicators of potential archaeological resources. If such a site is suspected, then the Archeologists would return to that location with spade shovels and perform a limited excavation of the test hole that would measure approximately 2x2 feet square and approximately 2-3 feet deep. Any area that is excavated for this type of survey will be restored by the company to a condition consistent with its condition prior to the excavation. Depending on the length of the proposed route of the pipeline on the property being surveyed, the archaeological walkover will take less than one day. If a limited archaeological excavation is necessary, it should take no longer than two days, weather permitting.

During any survey work, no trees over 2 inches in diameter or timber will be cut down or removed from any property. Small brush, however, may be cut in order for the civil surveyors to obtain a line-of-sight. If any such brush is cut in residential areas, it will be removed from the property by company representatives.
