

Proposed Sabal Trail Transmission Expansion and Extension Development

Sabal Trail Transmission, LLC (“Sabal Trail”) is in the early assessment stage of further developing its existing interstate natural gas pipeline system in the Southeast. This proposed project is intended to increase and diversify transportation capacity to reliably deliver natural gas to power-generating companies, local distribution companies and other end users.

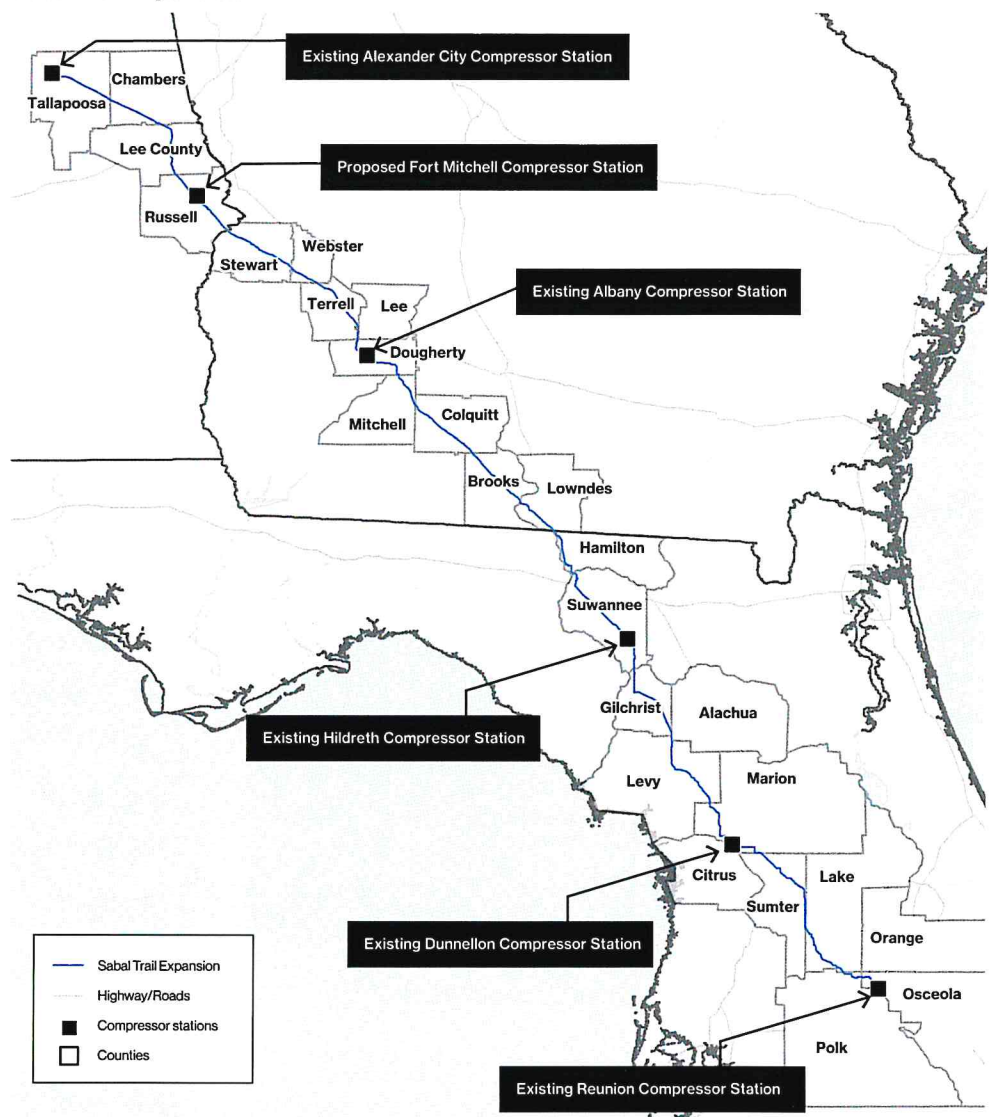

Project overview

The proposed project consists of two major segments*:

- An “**Expansion**” of the existing pipeline from Alexander City, AL to Reunion, FL installing additional horsepower at new and existing compressor station facilities and constructing new pipeline along or near the existing pipeline route.
- An “**Extension**” of the existing Sabal Trail pipeline from Alexander City, AL moving westward to connect with existing major pipelines in Mississippi. This Extension would also enable the efficient delivery of natural gas to potential customers along the pipeline route in Alabama.

* Ultimately, the full scope of the project will be finalized once all customer commitments are received.
