### Land Development Regulations

In Chapter 106 the definition for FAÇADE is “The exterior of a building facing the principle street entrance, and extending the entire width of the building elevation”

In Chapter 210-3 there are numerous references to the word “façade”

On page 5, item #3 at the top of the page states “facing and plainly visible”. The word “and” ties “facing” and “plainly” together. If the word “or” was used, the words “facing” and “plainly” would not be tied together. The rest of the statement clearly makes reference to a street or customer/visitor parking lot.

Based on this information we are requesting that the existing metal siding on the south end of the building be allowed to remain.
